

The 79% Keyboard

By Will Schaible, 15 US

The keyboard was built with customization in mind. Keys are hotswappable, Software personalizable, and buttons programmable. The 4 keys along the left side and the 11 keys on the right are designed to be easily made into macros for everyday convenience.

This bad boy rocks an ESP 32-S3 Devkit C, as well as 93 Brown Cherry MX Switches, a volume dial, and a small programmable screen.

Check out my github!!!

A keyboard that isn't quite 80%, but isn't 75% either! It rocks a wired or wireless connection, a rotary encoder, a small OLED screen, and its own custom software!
